

PC Armor™ does what AntiVirus programs can't.

AntiVirus products use scanning engines that rely on a library of known viruses. Cures or scripts that attack the viruses are written and released only AFTER a new threat has been discovered and the virus is out infecting computers. Scanning can take hours and can negatively impact PC performance. Worse - if the virus finds you before your antivirus software knows about the virus, you're infected!

3-in-1 Protection starting from the Internet.

Up-to-the-minute information that tells you what sites are good and which ones to stay away from. Threat protection against all kinds of malware.

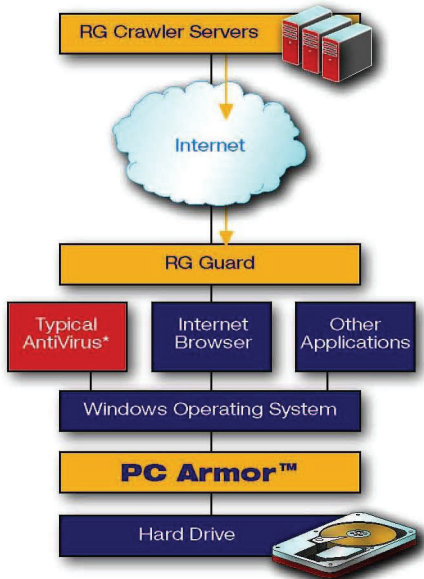

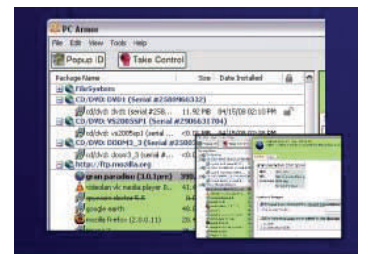

Protection all the way down to your Hard Drive.

Displays which sites contain programs that can infect your computer such as spyware, trojans, viruses, network worms and rootkits.

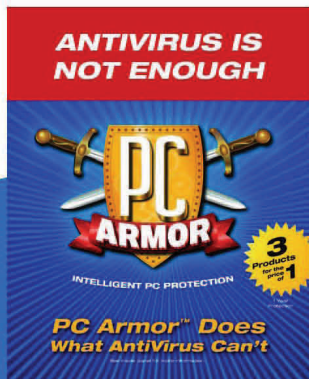

PC Armor™ protects you before they show up.

PC Armor™ does not have to know about a virus or malware program ahead of time to protect your PC. It monitors all programs and hard drive-level activity, paralyzing any behavior that might compromise the security of your PC.

\$39.95
(1 year subscription)

Patent Pending.

System Requirements:

- Intel® Pentium® III or compatible processor
- Microsoft® Windows® Vista, Windows XP Professional, Home Edition, or Tablet PC Edition with Service Pack 1 or higher
- 256MB of RAM (512MB or higher recommended)
- 20MB available program space. 80MB available hard-disk space for system restoration data
- Microsoft Internet Explorer 6.0 or higher, Firefox 3.0.3

INCLUDES: RG Crawler, RG Guard & PC Armor

- **RG Crawler**—Is the industry's first automated server crawler farm that automatically tests all software found on websites to determine which programs are safe for your PC.
- **RG Guard**—Data received from RG Crawler is integrated into your Internet browser, giving you information about websites BEFORE you enter.
- **PC Armor**—Is a leading-edge behavior-based technology that protects your computer's core from malicious programs and viruses in a way standard Antivirus software cannot.
